**Adult installation required.**

A ladder is frequently required for Hoop Brightz installation: review and follow all safety instructions provided by ladder manufacturer. Failure to follow ladder manufacturer's instructions can lead to injury.

### Step 1 – Install Batteries

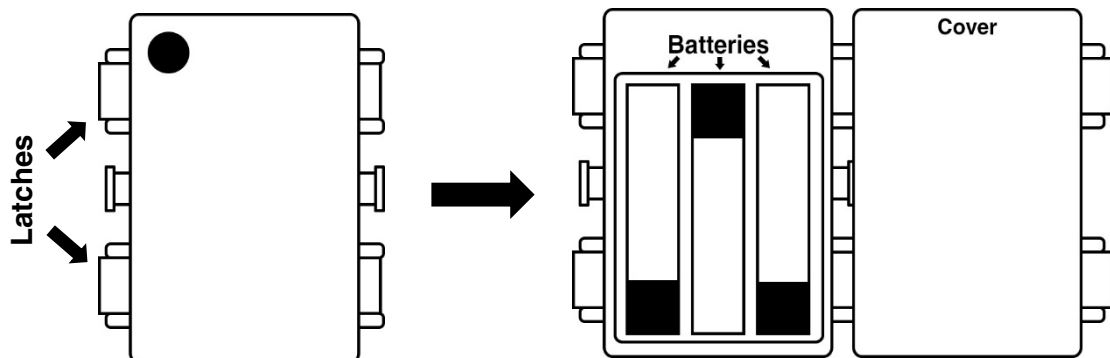

Open latches on the side of the battery pack to access batteries. Install 3 fresh AA batteries, observing correct polarity (+/-). Close the battery pack, making sure the latches snap shut.

*Do not mix old and new batteries and do not mix alkaline, standard (carbon-zinc) or rechargeable (nicad, ni-mh, etc.) batteries.*

**Caution:** Batteries may explode or leak, and cause burn injury if recharged, disposed of in fire, mixed with a different battery type, or inserted backwards. Replace all used batteries at the same time. Clean battery contacts and contacts on the device prior to installing. Remove batteries if item will not be used for long periods of time. When battery expires remove promptly.

### Step 2 – Install Rim String Light Around Basketball Rim

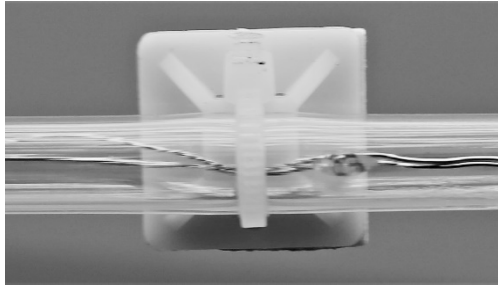

Weave Rim light string (smaller of 2 strings) in net holder hooks. For basketball hoops where weaving technique does not work, use mounting ties.

**Important:** Make sure end of light string with battery wire ends up close to backboard.

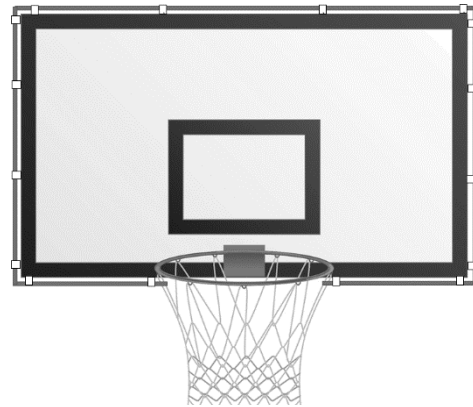

### Step 3 – Install Backboard String Light

NOTE: Clean surface area before placing the fasteners. Place adhesive-backed fasteners on sides of backboard, spacing approximately 4 fasteners to each side. Press firmly.

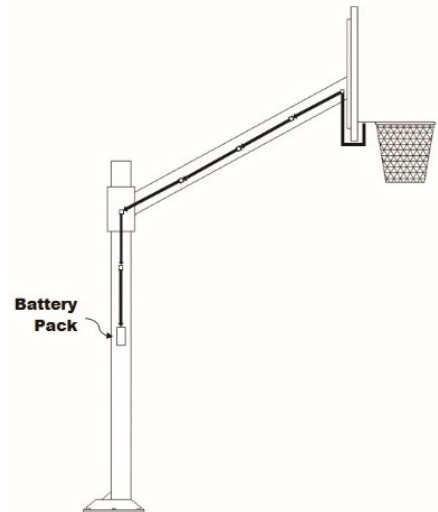

Install **backboard string light** by “outlining” backboard with light string (longer of 2 strings). Secure with mounting ties at each fastener. **Important:** Ensure final position of battery wire is close to basketball pole.

### Step 4 – Mount Battery Wires to Basketball Pole

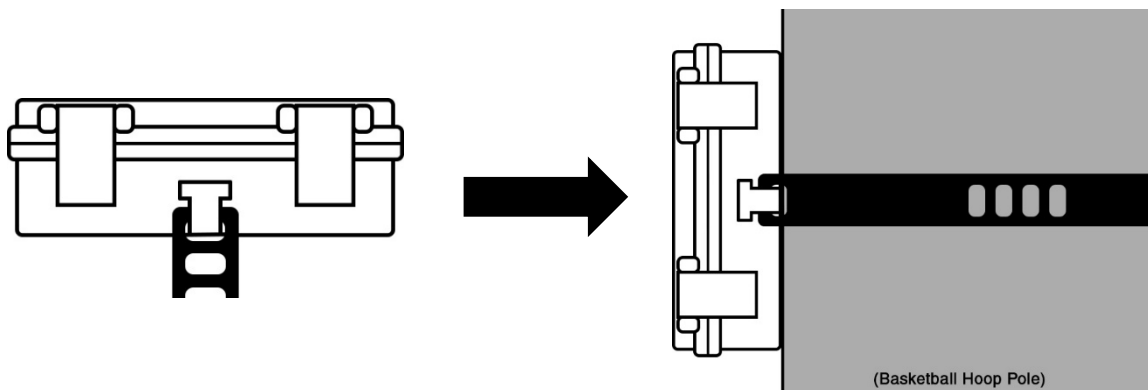

- Determine routing of wires from backboard and rim to battery pack.
- Make sure to clean the area first where the fasteners will be placed. Firmly press adhesive-backed fasteners to basketball pole.
- Insert mounting ties in fastener openings.
- Gather battery cords, loop with mounting ties, tighten mounting ties.

### Step 5 – Install Battery Pack

Recommended location: on the back or side of the pole.

Take the silicon strap and loop one of the end holes over the T-hook on the side of the battery pack. Place the battery pack against the hoop pole, pull the silicon strap around the pole, and secure it on the other T-hook.
