

# Toss Brightz™

## Instructions

©Copyright Brightz, Ltd. 2018  
Patent Pending • All rights reserved

### Step 1 – Install Batteries

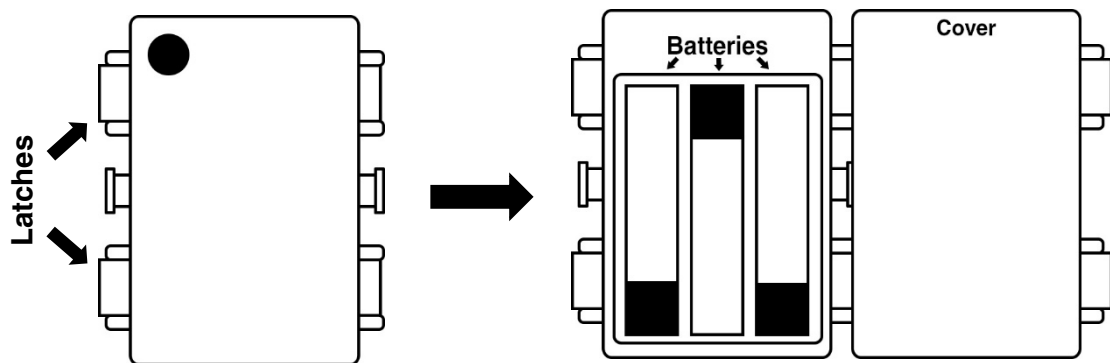

Open latches on the side of the battery pack to access batteries. Install 3 fresh AA batteries, observing correct polarity (+/-). Close the battery pack, making sure the latches snap shut.

*Do not mix old and new batteries and do not mix alkaline, standard (carbon-zinc) or rechargeable (nicad, ni-mh, etc.) batteries.*

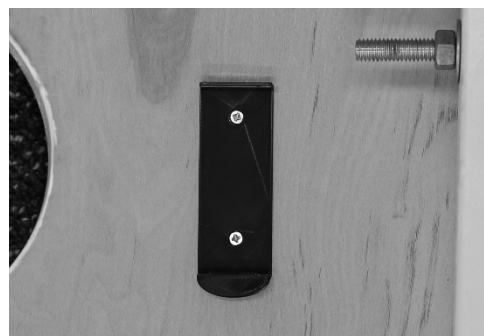

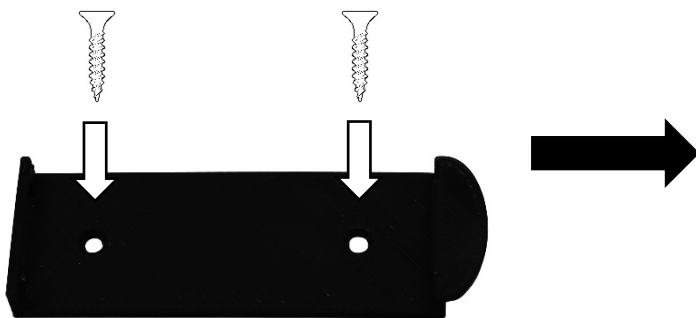

*Caution: Batteries may explode or leak, and cause burn injury if recharged, disposed of in fire, mixed with a different battery type, or inserted backwards. Replace all used batteries at the same time. Clean battery contacts and contacts on the device prior to installing. Remove batteries if item will not be used for long periods of time. When battery expires remove promptly.*

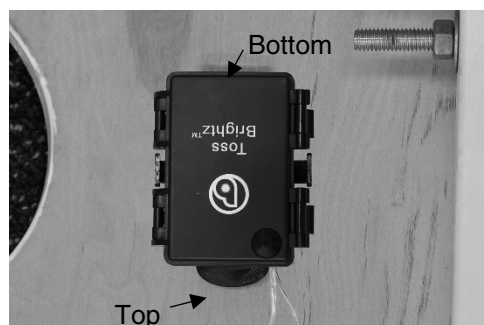

### Step 2 – Install the Battery Pack

Turn the board over so the back side is facing up. Using 2 screws, attach the clip plate to the back of the board, next to the hole at the top.

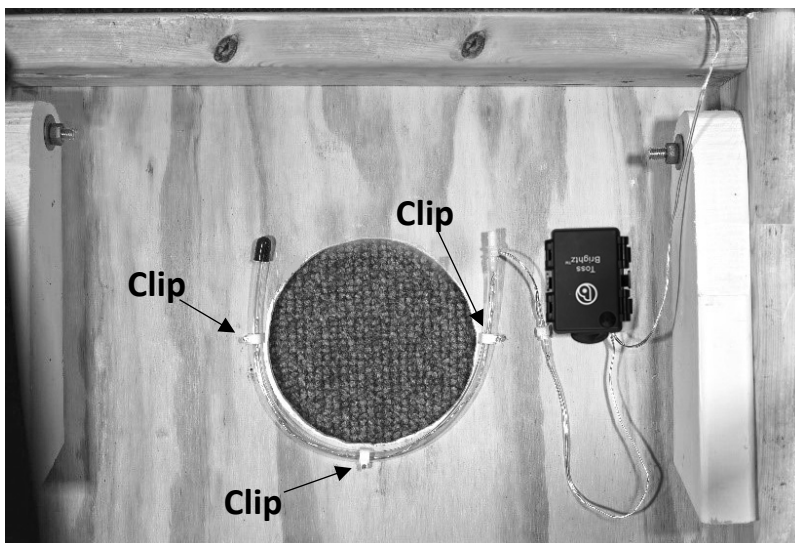

Then snap the battery pack into place. Align the bottom of the battery pack in the bottom of plate, then push the battery pack into place until you hear it snap together.

To release the battery pack, push the top tab of the plate back.

### Step 3 – Install the Lights Around the Hole

Keeping the board flipped over, attach one of the 1-foot LED light strings around the hole using 3 screw-in fasteners as shown.

### Step 4 – Installing the Lights Around the Outside of the Board

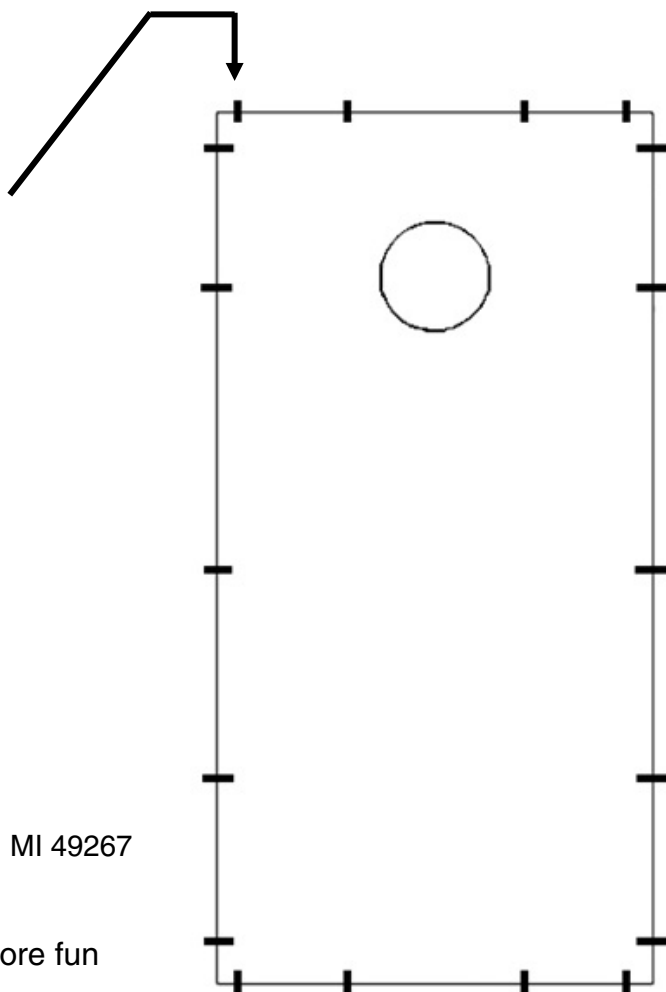

Flip the board back to the front. Attach one of the 12-foot LED light strings to the outside of the board, using the nails and clips (similar to Step 3). See diagram below for clip placement.

#### Important!

Start Here (See Arrow) for optimal installation.

Begin installation of LED string here and work **counterclockwise** around the board. This allows the battery pack to be placed closer to the bean bag hole.

Toss Brightz can then be turned on/off simply by reaching through the hole.
