Step 1 – Install Batteries

Open latches on the side of the battery pack to access batteries. Install 3 fresh AA batteries, observing correct polarity (+/-). Close the battery pack, making sure the latches snap shut.

Do not mix old and new batteries and do not mix alkaline, standard (carbon-zinc) or rechargeable (nicad, ni-mh, etc.) batteries.

Caution: *Batteries may explode or leak, and cause burn injury if recharged, disposed of in fire, mixed with a different battery type, or inserted backwards. Replace all used batteries at the same time. Clean battery contacts and contacts on the device prior to installing. Remove batteries if item will not be used for long periods of time. When battery expires remove promptly.*

Step 2 – Select a Location

Choose a location to mount the battery pack, away from moving parts.

Step 3 – Install Battery Pack

Take the silicon strap and loop one of the end holes over the T-hook on the side of the battery pack. Place the battery pack against the frame of the bike, pull the silicon strap around the frame, and secure it on the other T-hook.

 *Warning: Do not mount the battery pack near or on moving parts, or where it has the potential to interfere with moving parts.*

Step 4 – Install Lights

Wrap the lights around the parts of the frame you wish to light up.

 *Warning: Do not string lights on or in proximity of moving parts. Do not mount in any area that would prevent turning, like the handlebars.*

Step 5 – Secure Lights

Secure the end of the light string with the included wire tie, with one LED light placed after the wire tie.
